Anthropometry. Facts About The Human Body

September 1, 2022

Anthropometry has new facts today and this science is always very important to people. It is the anthropology and the work with bones, with the human forms and it is needed not only for medical purposes but also for the typology.

Anthropometry Has New Facts Hidden In Typology

But what can typology say about the bones and the body shape of one or another person? As we mentioned before, we discovered eight innate groups of people, that have completely different stable life views and preferences. After

we discovered these groups, there were also some differences in human body shape were discovered too.

Difference In Bones And Body Structure Of People

These differences are especially in their appearance and form of their body and bones. These observations were recorded by us and now we want to share them with you.

Here is the list of eight innate groups that were divided in comparison by their generalized average height and body shape.

Short stature:

Virtue – oval face and body, long hands and legs

Ethnos – round face and body, short and strong legs and hands

Toastmaster – elongated face and body, short legs and hands

Marxist – square face and body, clumsy and long hands and feet

Tall stature:

Pharaoh – oval face and body, long hands and legs

Patron – rectangular fance and body, short legs and hands

Pilgrim – elongated face and body, short legs and hands

Cognitive – triangle body and face, long hands and legs

Of course, there are some anomalies and deviations from the norm. But such deviations are present in a minority of people. Therefore such typology information is aimed to help others in noticing the natural differences between 8 groups of people.
